Claims 1 and 10 of the instant application have been amended as follows:

1. A method for providing a translated output signal derived from a speech input signal to improve conversation, the method comprising:
 - i. receiving a speech input signal from a speaker in a first language via a speech input device;
 - ii. converting the speech input signal into a digital format comprising a voice model component representing the speaker's voice patterns and a content component representing the content of the speech input signal;
 - iii. translating the content component from the first language into a second language to provide a translated content component;
 - iv. combining the translated content component with the voice model component to more accurately reflect conversational speech; and generating an audible output signal comprising the translated content in a second language in an approximation of the speaker's voice;

Art Unit: 2626

v. wherein the audible output signal is an approximation of the speech patterns of the input signal, and the translated output is combined with the voice model component to approximate the speaker's voice to more accurately reflect conversational speech.

10. A device that provides for translation of speech, and improved conversation, the device comprising:

- i. a speech input device component;
- ii. a converter for converting a speech input signal received by the speech input device into a digital format comprising a voice model component representing the speaker's voice patterns, that is, the speech pattern of the speech input signal and a content component representing a content of the speech input signal;
- iii. a language converter for translating the content component from a first language to a second language to provide a translated content component;
- iv. a component for combining the translated content component with the voice model component; and
- v. a speech output device component for generating an audible output signal comprising the translated content component combined with the voice model component in an approximation of the speech patterns of the speech input signal to more accurately reflect conversational speech.

Allowable Subject Matter

3. Claims 1-10 are allowed. The following is an examiner's statement of reasons for allowance: The examiner points to applicant's remarks from 23 September 2008, specifically pages 5-16 as discussion pertinent to how the pending claims differ from discovered prior art available at the time of invention.
